			MAIL DATE	DELIVERY MODE	
			05/12/2008	PAPER	

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

## Application No. Applicant(s) 10/740.032 POTTER, BRUCE M. Office Action Summary Examiner Art Unit KYUNG H. SHIN 2143 -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS. WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status 1) Responsive to communication(s) filed on 05 March 2008. 2a) ☐ This action is FINAL. 2b) This action is non-final. 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213. Disposition of Claims 4) Claim(s) 1 - 3, 5 - 20 is/are pending in the application. 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration. 5) Claim(s) \_\_\_\_\_ is/are allowed. 6) Claim(s) 1 - 3, 5 - 20 is/are rejected. 7) Claim(s) \_\_\_\_\_ is/are objected to. 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement. Application Papers 9) The specification is objected to by the Examiner. 10) The drawing(s) filed on is/are; a) accepted or b) objected to by the Examiner. Applicant may not request that any objection to the drawing(s) be held in abevance. See 37 CFR 1.85(a). Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d). 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152. Priority under 35 U.S.C. § 119 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). a) All b) Some \* c) None of: Certified copies of the priority documents have been received. 2. Certified copies of the priority documents have been received in Application No. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)). \* See the attached detailed Office action for a list of the certified copies not received. Attachment(s) 1) Notice of References Cited (PTO-892) 4) Interview Summary (PTO-413) Paper No(s)/Mail Date. \_\_\_ Notice of Draftsperson's Patent Drawing Review (PTO-948)

Information Disclosure Statement(s) (PTO/SZ/UE)

#### DETAILED ACTION

### Continued Examination Under 37 CFR 1.114

- 1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/5/2008 has been entered.
- This application was filed on 12-18-2003. Claims 1 3, 5 20 are pending.
   Claims 1, 11, 16 have been amended. Claim 4 has been cancelled. Claims 1, 11, 16 are independent.

# Response to Arguments

 Applicant's arguments filed 3/5/2008 have been fully considered but are moot due to the new grounds of rejection.

## Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

 Claims 1 - 3, 5, 7 - 13, 15 - 18, 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bautista-Lloyd et al. (US PGPUB No. 20020152239) in view of Rees (US PGPUB No. 20040098493).

Page 3

Application/Control Number: 10/740,032

Art Unit: 2154

Regarding Claims 1, 11, Bautista-Lloyd discloses a method, system of updating event data on a page of a computing environment, said method comprising:

automatically, periodically retrieving by the browser server event data using a refresh capability of a page displayed by the browser: (Bautista-Lloyd para 004, II 6-14: ); and the event data being updated information associated with only a portion of the data frame (Bautista-Lloyd para 041, II 1-16; transfer only the data needed to update those fields or areas of the page having new data; only new updated data is transferred the browser does not redraw the entire page contents in the page); and updating by the browser a portion of the data frame of the page with event data automatically retrieved using the refresh frame, the updating including employing code understood natively by the browser (Bautista-Lloyd para 044, II 1-8: implementations includes a web browsers displaying a web page having multiple HTML frames; para 045, Il 1-2: web browsers capable of rendering HTML or XML data (code understood by web browsers)), wherein the portion of the data frame updated is the portion of the data frame to which the event data is associated, and comprises at least one element of the data frame selectively chosen based on the event data (Bautista-Lloyd para 007, Il 7-14: server detect state changes (event data) and queue information; event data selected based on change to event data), the portion of the data frame updated being less than the entire data frame. (Bautista-Lloyd para 041, II 11-16: browser does not redraw the entire page) Bautista-Lloyd does not explicitly discloses whereby the refresh frame being part of a frameset including the refresh frame and a data frame, the refresh frame being a

Application/Control Number: 10/740,032 Page 4

Art Unit: 2154

hidden, zero-width frame and the data frame being a visible frame including an application interface.

However, Rees discloses:

a) a refresh frame of a page displayed by the browser, the refresh frame being part of a frameset of the browser, the frameset including the refresh frame and a data frame, the refresh frame being a hidden, zero-width frame and the data frame being a visible frame including an application interface; (Rees para 017, II 1-7; para 017, II 18-21; para 019, II 1-4; para 064, II 1-5: refresh, hidden refresh frame, data frame, only portion of web page (frame) updated is processed) and

 b) using the refresh frame, the updating including employing code understood natively by the browser. (Rees para 017, II 1-7; para 017, II 18-21; para 019, II 1-4; para 064, II 1-5: refresh, hidden refresh frame, data frame, only portion of web

page (frame) updated is processed)

It would have been obvious to one of ordinary skill in the art to modify Bautista-Lloyd for the refresh frame being part of a frameset including the refresh frame and a data frame, the refresh frame being a hidden, zero-width frame and the data frame being a visible frame including an application interface as taught by Rees. One of ordinary skill in the art would have been motivated to employ the teachings of Rees in order to enable the capability for efficient processing of refresh information based on refreshing only the required frame. (Rees para 017, II 9-21: "... When the agent does not want to change the Web page seen by the client, only one of the pair of frames (the one containing the refresh instruction) is transmitted to the client in

Art Unit: 2154

response to the request from the client so the information which the client sees does not change. However, since that refresh instruction is a request to retrieve data from a particular site, if the agent changes the site corresponding to that refresh instruction, the client will be presented with a different Web page at the next refresh operation. The refresh instruction will then cycle, refreshing only the frame with the refresh instruction until the agent again changes the data to which the refresh operation is directed. ..."

Regarding Claims 2, 12, 17, Bautista-Lloyd discloses the method, system, program storage device of claims 1, 11, 16, wherein said code understood natively by the browser comprises code supported by an interpreter built into the browser as originally configured. (Bautista-Lloyd para 016, II 3-7: computer architecture utilized Java servlets; Java language (natively understood by browser))

Regarding Claim 3, Bautista-Lloyd discloses the method of claim 1, wherein said code understood natively by the browser comprises JavaScript code. (Bautista-Lloyd para 016, II 3-7: computer architecture utilized Java servlets; Java language (natively understood by browser); para 035, II 13-21: the update servlet generates a script or small program to apply the content updates)

Regarding Claims 5, 13, 18, Bautista-Lloyd discloses the method, system, program storage device of claims 1, 11, 16, wherein the frameset comprises a plurality of data

Art Unit: 2154

frames, and the automatically, periodically retrieving comprises associating with the refresh frame a parameter that identifies one data frame of the plurality of data frames for which server event data is to be retrieved. (Bautista-Lloyd para 021, II 17-19: includes a frame identifier identifying a frame within the page)

Regarding Claim 7, Bautista-Lloyd discloses the method of claim 1, wherein said automatically, periodically retrieving further comprises periodically requesting, by the refresh frame, the server to refresh the refresh frame. (Bautista-Lloyd para 004, II 6-14; para 035, II 1-6: dynamic content is frequently changing, web browser will periodically request further data from the server; web browser will automatically submit additional HTTP GET requests at specified time intervals and update dynamic content (refresh capability))

**Regarding Claims 8, 15**, Bautista-Lloyd discloses the method, system of claims 5, 13, wherein said periodically retrieving further comprises:

- a) detecting the event data; (Bautista-Lloyd para 007, II 7-8: server detects state changes (change in event data) and queue information on state changes)
- b) sending, responsive to the detecting, the event data to the browser via the server; (Bautista-Lloyd para 007, Il 8-10: server generates an update package including content and sends the update package to the client (browser)) and
- c) wherein the detecting and the sending are performed automatically by an application coupled to the server irrespective of a manual request by a user for at

Art Unit: 2154

least one of the periodically retrieving and the updating. (Bautista-Lloyd para 004, II 6-14: dynamic content periodically refreshed; meta-refresh tag to cause the client web browser to automatically submit additional HTTP get requests; para 035, II 1-6: metatag parameter to invoke automatically, periodically the refresh operation for frames)

Regarding Claim 9, Bautista-Lloyd discloses the method of claim 1, wherein said periodically retrieving the event data (Bautista-Lloyd para 004, II 6-14: dynamic content periodically refreshed; meta-refresh lag used to automatically submit additional HTTP get requests; para 035, II 1-6: metatag parameter invokes automatically, periodically refresh operation for frames) further comprises receiving the event data at the browser within the code understood natively by the browser to be used to update the portion of the data frame, wherein the code is generated by the application. (Bautista-Lloyd para 036, II 1-5: logic embedded in the code of the concatenated scripts to cause the browser to update specific fields in application panes of the frames with the update data)

Regarding Claim 10, Bautista-Lloyd discloses the method of claim 1, wherein said updating the portion of said data frame further comprises executing the code by the browser to update the portion of the data frame. (Bautista-Lloyd para 036, II 1-5: logic embedded in the code of the concatenated scripts to cause the browser to update specific fields in application panes of the frames with the update data; para 037, II 11-

Art Unit: 2154

14: code to cause browser to apply updates to only those fields for which new property or status information is available)

Regarding Claim 16, Bautista-Lloyd discloses at least one program storage device readable by a machine, tangibly embodying at least one program of instructions executable by the machine to perform a method of updating event data on a page of a computing environment, said method comprising:

automatically, periodically retrieving by a browser server event data using a refresh process of a page displayed by the browser; (Bautista-Lloyd para 004, II 6-14; dynamic content is frequently changing, web browser will periodically request further data from the server; web browser will automatically submit additional HTTP GET requests at specified time intervals and update dynamic content (refresh capability)); and the event data being updated information associated with only a portion of the data frame: (Bautista-Lloyd para 041, II 1-16; transfer only the data needed to update those fields or areas of the page having new data; only new updated data is transferred the browser does not redraw the entire page contents in the page) and updating by the browser only the portion of the data frame of the page with event data automatically retrieved, wherein the portion of the data frame updated is the portion of the data frame to which the event data is associated, and comprises at least one element of the data frame selectively chosen based on the event data, the portion of the data frame updated being less than the entire data frame. (Bautista-Lloyd para 041, Il 11-16: browser does not redraw the entire page)

Application/Control Number: 10/740,032 Page 9

Art Unit: 2154

Bautista-Lloyd does not explicitly disclose whereby the refresh frame and a data frame, the refresh frame being a hidden, zero-width frame and the data frame being a visible frame including an application interface.

However, Rees discloses:

- a) using a refresh frame of a page displayed by the browser, the refresh frame being part of a frameset of the browser, the frameset including the refresh frame and a data frame, the refresh frame being a hidden, zero-width frame and the data frame being a visible frame including an application interface; (Rees para 017, II 1-7; para 017, II 18-21; para 019, II 1-4; para 064, II 1-5: refresh, hidden refresh frame, data frame, only portion of web page (frame) updated is processed) and
- b) using the refresh frame, the updating including employing code understood
  natively by the browser. (Rees para 017, II 1-7; para 017, II 18-21; para 019, II 1-4; para 064, II 1-5: refresh, hidden refresh frame, data frame, only portion of web
  page (frame) updated is processed)

It would have been obvious to one of ordinary skill in the art to modify Bautista-Lloyd for the refresh frame being part of a frameset including the refresh frame and a data frame, the refresh frame being a hidden, zero-width frame and the data frame being a visible frame including an application interface as taught by Rees. One of ordinary skill in the art would have been motivated to employ the teachings of Rees in order to enable the capability for efficient processing of refresh information based on refreshing only the required frame. (Rees para 017. II 9-21)

Art Unit: 2154

Regarding Claim 20, Bautista-Lloyd discloses the at least one program storage device of claim 18, wherein said periodically retrieving further comprises:

- a) detecting the event data; (Bautista-Lloyd para 007, II 7-8: server detects state changes (change in event data) and queue information on state changes)
- b) sending responsive to the detecting, the event data to the browser via the server;
   (Bautista-Lloyd para 007, II 8-10: server generates an update package including content and sends the update package to the client (browser)) and
- c) wherein the detecting and the sending are performed automatically by an application coupled to the server irrespective of a manual request by a user for at least one of the periodically retrieving and the updating. (Bautista-Lloyd para 004, II 6-14: dynamic content periodically refreshed; meta-refresh tag to cause the client web browser to automatically submit additional HTTP get requests; para 035, II 1-6: metatag parameter to invoke automatically, periodically the refresh operation for frames)
- Claims 6, 14, 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bautista-Lloyd-Rees and further in view of Tuttle et al. (US Patent No. 7,043,525).

Regarding Claims 6, 14, 19, Bautista-Lloyd discloses the method, system, program storage device of claims 5, 13, 18, further comprising subsequently calling by the one data frame the retrieving of event data for that data frame. (Bautista-Lloyd para 007, II

Art Unit: 2154

7-8: server detects state changes (change in event data) and queue information on state changes, retrieving of state changes (event data); para 015, II 9-16: download and render a page of content; content in each frame can be updated independently of other frames). Bautista-Lloyd does not explicitly disclose a function to stop the retrieving of event data for that data frame. However, Tuttle discloses wherein function to stop the retrieving of event data for that data frame. (Tuttle col 6, II 23-30: objects is data at the client that can be individually identified such as ..., frames, ... and other information ... embedded in the web page; col 11, II 48-58: client no longer desires to receive update messages, the client preferably closes the connection with the routing network; client sends messages to the routing network that selectively register and/or de-register the client from one or more objects (function to stop update), leaves connection open to receive updates messages pertaining to other objects)

It would have been obvious to one of ordinary skill in the art to modify Bautista-Lloyd to stop the retrieving of event data for that data frame as taught by Tuttle. One of ordinary skill in the art would have been motivated to employ the teachings of Tuttle in order to utilize bandwidth efficiently because the update messages are provided to the clients only when the live objects change. (Tuttle col 3, Il 17-21: " ... The routing network maintains the mappings between the live objects and the clients that are currently displaying them. This routing utilizes bandwidth efficiently because the update messages are provided to the clients only when the live objects change. ... ")

Art Unit: 2154

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to KYUNG H. SHIN whose telephone number is (571)272-3920. The examiner can normally be reached on 9:30 am - 6 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nathan J. FLYNN can be reached on (571) 272-1915. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
